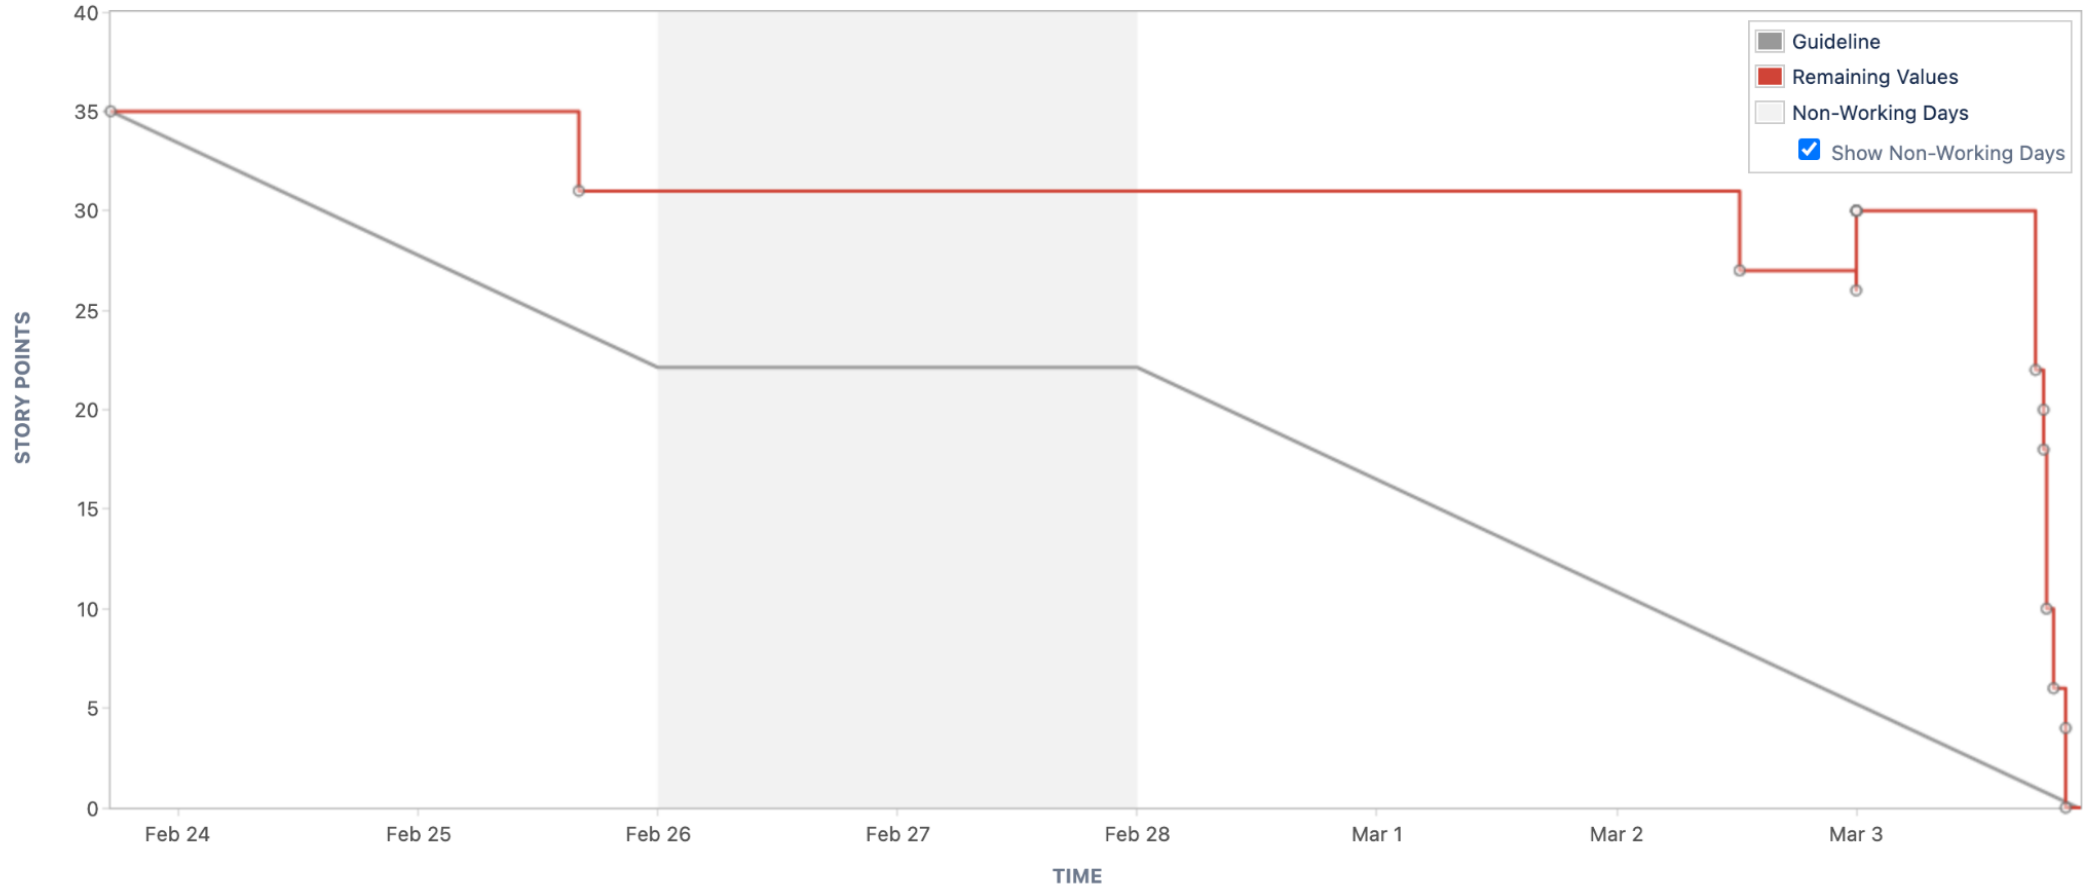
BH Sprint 2 Story Points

ACTIVE



From the burndown chart, it can be seen that most stories were completed within 48 hours of the deadline and the chart was far off the guideline. This was largely due to the team having to study for midterms and work on assignments from other courses. In the future, it would be beneficial to work on stories little by little each day, rather than doing the bulk of the work a few days before the end of the sprint, so that stories can be completed in a more linear fashion. The velocity of sprint 1 was 26 points and the planned velocity for this sprint (sprint 2) was 39 points. The velocity increased from sprint 1 because the duration of this sprint was a week longer, so we had more time to complete stories.
